组件说明

目前车辆组件分为

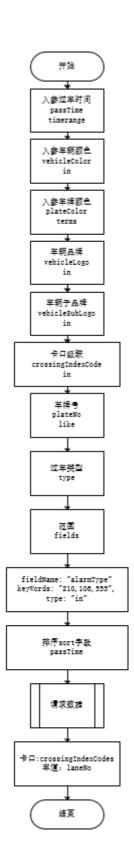

- 一、车辆查询
- 1、接口流程
- 1.1 枚举初始化

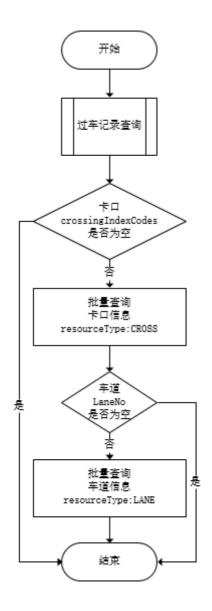

1.2 车辆卡口

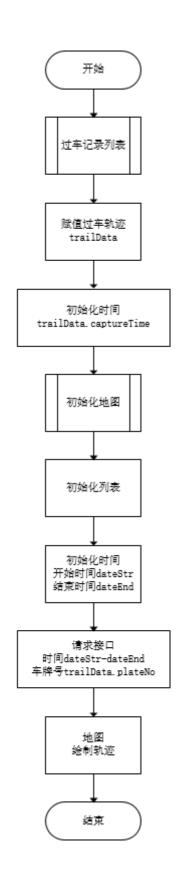

1.3 车辆记录查询

1.4 车道名称查询

1.5 车道轨迹 (地图轨迹功能已经移除)

2、接口说明

2.1、数据字典

URL: "univice/application/dictionary/v1/findAllByTypeCode"

入参:

参数	类型	是否必填	说明
typeCode	string	是	数据类型,
language	string	是	语言类型: zh_CN, en_US

typeCode入参说明

字段	类型	说明
balarm.surveillance_reason	string	卡口布控原因
xresmgr.lane_direction	string	车道朝向
ialarm.ivehicle_surveillance_reason	string	车辆布控原因

字段	类型	说明
common.vehicle_type	string	车辆类型
common.vehicle_color	string	车身颜色
common.plate_color	string	车牌颜色
common.plate_type	string	车牌类型
common.plate_location_location	string	车牌归属地
common.plate_state	string	车牌状态
xresmgr.shoot_direction	string	抓拍方向
common.sunroof_person_occupied	string	天窗站人
common.sunroof_has_sunroof	string	天窗
common.vehicle_spray_paint	string	车身喷字
common.vehicle_spare_tire	string	备胎
common.vehicle_pendant	string	挂件
common.vehicle_luggage_rack	string	行李架
common.vehicle_has_label	string	贴标
common.vehicle_anomaly_lamp	string	车灯异常
common.pilot_sunvisor_open	string	主驾驶遮阳板
common.copilot_sunvisor_ope	string	副驾驶遮阳板
common.pilot_belt_safe	string	驾驶员安全带
common.copilot_belt_safe	string	副驾驶安全带
common.pilot_on_phone	string	打电话
common.vehicle_copilot_in_child	string	副驾驶环保婴儿/儿童单独乘坐副驾
xdictvehicle.vehicle_models_model	string	品牌
common.illegal_act_type	string	违法类型

2.2、过车区域信息接口查询

2.2.1、过车区域

URL: univice/application/catalog/v1/findAsyncOrgsByCapAndAuth

入参

参数	类型	是否必填	描述
userId	string	是	登录用户userIndexCode
resourceType	string	是	默认值 CROSS 表查询区域
treeCode	string	是	默认值 "0",
parentIndexCodes	array	是	父节点编码, 值为 [code]

返回值

```
{
   code: "0",
   data: [
       {
           available:False,
           cascadeCode:0,
           cascadeType:0,
            externalIndexCode:3301,
            indexCode:root00000000,
            leaf:False,
            localQuantity:0,
            name: 杭州市交通警察支队,
            orgType:0,
            parentExternalIndexCode:-1,
            sort:1,
            treePath:@root00000000@,
        }
   ],
   msg: "SUCCESS"
}
```

2.2.2、过车区域卡口

URL: univice/application/device/v1/findResourcesByAuth

入参

参数	类型	是否必 填	描述
userld	string	是	登录用户userIndexCode
resourceType	string	是	默认值 CROSS 表查询区域
treeCode	string	是	默认值 "0",
orgIndexCodes	array	是	父节点编码 ,值为 [code]
pageNo	string	是	页面页码 默认为 0
pageSize	string	是	页面数量 默认为1000
fields	array	是	查询范围默认值为 ['indexCode', 'orgIndexCode', 'name']

返回值

```
{
   "code":"0",
   "msg":"SUCCESS",
    "data":[
        {
            "indexCode": "d8e1952f769542b09334cfb46a454552",
            "name":"滨江区交警大队",
            "parentIndexCode":"root00000000",
            "available":false, "leaf":true,
            "cascadeCode":"0", "cascadeType":0,
            "orgType":0, "externalIndexCode": "330108",
            "parentExternalIndexCode":"3301",
 "treePath": "@root00000000@d8e1952f769542b09334cfb46a454552@", "sort": 1, "localQua
ntity":2},
            "indexCode": "e11fd8bc3c6443b68498fa7a76e0edcc",
            "name":"萧山区交警大队",
            "parentIndexCode":"root00000000",
            "available":false, "leaf":true,
            "cascadeCode":"0",
            "cascadeType":0,
            "orgType":0,
            "externalIndexCode": "330109",
            "parentExternalIndexCode": "3301",
            "treePath": "@root00000000@e11fd8bc3c6443b68498fa7a76e0edcc@",
            "sort":1,
            "localQuantity":2
        },
   ]
}
```

2.3、查询过车信息接口

URL: univice/application/intelligentapplication/vehicle/v1/queryCommon

入参:

参数	类型	是否必填	描述
bigData	Obeject	是	查询结构体
-type	string	是	type=vehiclepass
-fields	string	是	fields=*
-maxResults	Number	是	每页数量
-searchResultPosition	Number	是	开始页码
-sort	Array	是	排序结构体
column=passTime	string	是	过车时间passTime
method=desc	string	是	method=desc
-fieldMultipleOptions	Object	是	其他条件查询结构体
and	array	是	且
fieldName	string	是	字段枚举有过车时间: passTime; 车牌颜色: plateColor, 车辆品牌: vehicleLogo; 车辆子品牌: vehicleSubLogo; 卡口级联: crossingIndexCode; 车牌号: plateNo;
keyWords	string array	是	字段的值, 类型可以是string 或是 array
type	string	是	fieldName字段关联type类型: passTime- timerange; plateColor-terms; plateNo- like; 其他均为in
not	array	是	并
 fieldName=alarmType	string	是	字段枚举 fieldName=alarmType
keyWords	string	是	字段alarmType 的值, 默认 keyWords=210,106,555
type	string	是	关联类型 type=in

返回:

```
{
    "code":0,
    "msg":"OK",
```

```
"remark":null,
    "bigData":{
        "matchList":[

            },
```

```
"timeConsume":71,
    "numOfMatches":20,
    "totalMatches":823785,
    "remark":null
}
```

2.4、批量查询卡口信息

URL: univice/application/device/v1/findResources

入参:

参数	类型	是否必填	说明
exactCondition	Object	是	查询结构体
- indexCode	Array	是	卡口编号数组
pageNo	Number	是	页面 1
resourceType	String	是	"CREOSS" 表卡口 "LANE": 表车道
pageSize	Number	是	返回数据长度

当resourceType值为CREOSS 返回值

```
{
    "code": "0",
    "msg": "SUCCESS",
    "data": {
        "total": 3,
        "list": [
            {
                "cascadeMessage": null,
                "crossingType": 81,
                "flag": null,
                "nameStr": "84_38001过车",
                "originApp": "@xres@",
                "shootDirection": null,
                "latitude": "30.1761315024354",
                "indexCode": "e9879e254ca54b8f935c344f95606c77",
                "intercityType": 1,
                "attributeSet": null,
                "governFlag": null,
                "pinyinAll": "84_38001guoche",
                "largeSpeedLimit": "30",
                "smallSpeedLimit": "40",
                "id": "e9879e254ca54b8f935c344f95606c77",
                "tag": null,
                "frontType": "10&1000&11&12&50",
                "roadLevel": null,
                "longitude": "119.9433779630849",

                "resourceType": "lane",
                "operateDeleteFlag": "false"
            },
            . . . . . .
        ]
    }
}
```

2.5、查询地图服务参数

URL: hgis-services/rest/services/sysConf/getMapParams

入参

返回

返回获取平台hgis地图配置参数

2.6、查询车牌归属地参数

URL: "univice/application/config/v1/query"

入参:

参数	类型	是否必填	描述
common.vehicle.number.location	string	是	常量 common.vehicle.number.location

返回:

获取平台车牌归属地配置

```
"code":"0",
"msg":"SUCCESS",
"data":{
    "common.vehicle.number.prefix":"common.plate_location_location:3.1",
    "common.vehicle.number.location":"true"
}
```

3、常见问题

- 3.1、图片加载问题
 - 排查接口图片字段是否有返回
 - 排查图片是否过网关代理插件
- 3.2、车道方向问题
 - 排查接口字段返回
- 3.3、车辆布控原因
 - 字段枚举翻译问题
 - 比对枚举翻译以及字典信息的匹配
- 3.4、过车卡口
 - 过车区域接口是否正常 (一般是权限问题, 或是拉取不到卡口信息)
 - 过车信息接口返回卡口信息是否正常 (接口返回字段为空)
 - 根据接口返回的卡口信息,查询卡口列表

4、排查方式

通过抓包工具接口分析, 步骤如下:

- 4.1、下载抓包工具 (Fiddler) , 安装抓包工具, 打开抓包工具设置, 设置代理端口,
- 4.2、下载测试版本APP,安装到手机山,连接内网wifi, 设置抓包工具的代理地址端口 (地址默认本机 IP)
- 4.3、操作手机APP工具,查看抓包工具内的接口请求,核对参数是否返回

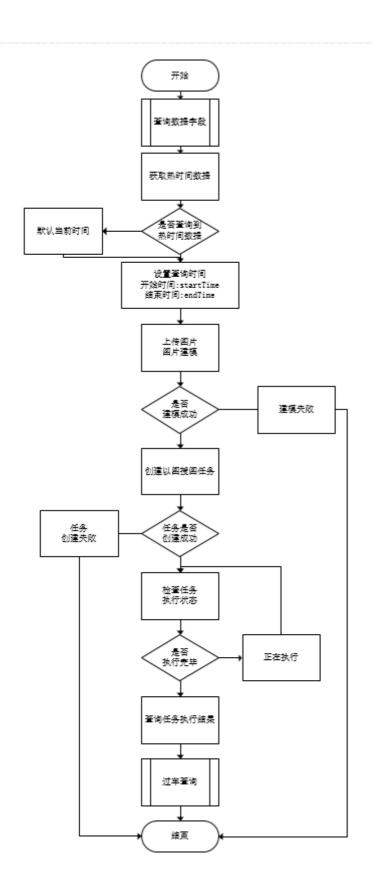

二、以车搜车

1、接口流程

1.1、查询字典

与车辆查询中枚举初始化流程一致

1.2、以图搜图

2、接口说明

2.1、hatom图片插件获取图片,转base64, H5获取失败

```
hatom.camera((res)=>{
    imageBase64 = res.message
},{
    srcType: "1",
    destType: "0",
    targetwidth: "1080"
})
```

2.2、上传base64到建模接口,创建建模信息

URL: "univice/application/intelligentdispatching/v1/image/single/vehicle/detectionAndModeling"

入参

参数	类型	是否必填	描述
taskInfo	object	是	查询结构体
-taskSource	string	是	任务来源,组件名称,默认值 "ivehicle", 否则填写other
-imageType	string	是	图片数据类型: URL-URL方式, binary-图片二进制数据
-imageData	string	是	图片数据,string类型,当数据类型为URL时,填写图片访问地址,图片URL的长度不超过512,http或https开头;当数据类型为binary时,填写图片数据通过Base64编码后的字符串
- aiFunctionCode	string	否	算法标识,如果指定了aiFunctionCode,则优先使用该算 法进行分析

2.3、根据建模信息创建以图搜图任务

URL: "xvot-logic/service/rs/v1/vehicle/createlmageSearch"

入参:

参数	类型	是否必填	描述
passTimeStart	string	是	开始时间
passTimeEnd	string	是	结束时间
modelCmpThreshold	string	是	相似度
vehicleLogo	string	是	车辆品牌
vehicleType	string	是	建模返回的车辆类型
modelInfo	object	是	建模接口返回的模型信息

2.4、轮询任务id查询状态,

URL: "univice/application/event/v1/vehicle/compareProcess"

入参

参数	类型	是否必填	描述
taskld	string	是	任务ID

2.5、根据任务状态查询过车记录信息结果

URL: "univice/application/event/v1/vehicle/compareResultPage"

入参:

参数	类型	是否必填	描述
pageSize	number	是	每页的数量
searchResultPosition	number	是	每页的页码
taskld	string	是	轮询任务接口返回的taskId

返回值

2.6、查询热时间数据

URL: "univice/application/event/v1/InstanceApply/hotDataRange"

入参

参数	类型	是否必填	描述
instanceKey	string	是	默认值填写"VEHICLE"
applicationKey	string	是	默认值填写 "vehicle-pass-app"

3、常见问题

- 3.1 图片上传失败
- 3.2 图片建模失败
- 3.3 查询建模任务接口失败
- 3.4 没有查询到建模任务关联的过车信息

4、排查方式

- 4.1、下载抓包工具,安装抓包工具,打开抓包工具设置,设置代理端口,
- 4.2、下载测试版本APP,安装到手机山,连接内网wifi, 设置抓包工具的代理地址端口 (地址默认本机 IP)
- 4.3、操作手机APP工具, 查看抓包工具内的接口请求, 核对参数是否返回
